LET'S TALK

Start the conversation today to find out what your business has to gain from the right solutions. Put our barcode and RFID pros to the test – so you can get back to doing what you do best.

AB&R®
identify. track. manage.

AB&R HAS YOUR SOLUTION

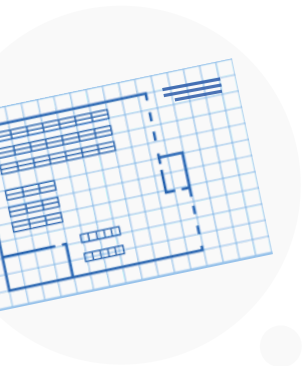

A LOOK INSIDE OUR SOLUTION PROCESS

Solving challenges and making it easier for you to meet Automatic Identification and Data Collection (AIDC) requirements is our priority. Our solution services start by defining your business' need. Once that is determined, the solution process is delivered in three phases.

PHASE I SYSTEM DESIGN

During this phase our experts will:

- Visit your location to learn more about your specific business requirements and conduct a professional site survey.
- Test various hardware and tags/labels to identify those that will provide you with your desired outcome.
- Upon completion of a site survey, we will develop and deliver a comprehensive Solutions Requirement Design Study (SRDS), detailing our recommendations for the best products & services that address your specific requirements.

PHASE II QUALIFICATION PILOT

This phase includes the following:

- Acquisition of selected equipment, software, supplies and services (as appropriate).
- Installation, operation and collection of performance qualification data for the recommended solution.

PHASE III IMPLEMENTATION

Our final phase includes:

- Installation, documentation, training and ongoing testing and performance evaluations of your equipment, software, & services into your production environment.
- Quarterly Business Review meetings to discuss progress to date, outstanding issues that may need further assistance, and ways to further maximize your return on investment.

INDUSTRIES WE SERVE
