Honeywell

Improve Efficiency in Your Distribution Center with Operational Intelligence

Operational Intelligence is a centralized, cloud-based platform that manages the operational lifecycle, visibility and performance of mobile device fleets. This robust tool is a blend of product intelligence and design that optimizes the process of tracking and servicing IT assets.

Rethinking how devices are utilized and then transitioned through the lifecycle of procurement, deployment and retirement is the core of Operational Intelligence. The goal is to drive process improvement through device usage, analytics and reporting. Ultimately, effective operational IT asset management can save your organization millions of dollars.

Operate your DC at peak performance with Operational Intelligence features:

- Standardized IT Asset Data
- Software Updates/Remote Configuration
- Optimized IT Asset Inventory
- Lost Device Recovery
- Managed RMAs and SLAs
- Advanced Battery Management
- Device Performance Monitoring
- Worker Insights
- Event Monitoring
- Worker Time Studies
- Device Drop Detention
- AI-Based Optimizations

Get More out of Your IT Assets with the Mobility Edge Platform

In addition to asset management, the seamless integration and connectivity of devices throughout your distribution center is vital in creating workflow efficiencies and increasing productivity. Partnering with Honeywell, AB&R brings a dynamic and unified hardware and software platform to your distribution center: Mobility Edge. Mobility Edge is a suite of tools designed to extend product lifecycle and streamline the implementation of new mobile devices. With versatile, out-of-the-box functionality, enhanced security and a rapid provisioning suite, Mobility Edge expedites development, certification, setup and training. Applications can be validated and updated just once across all hardware devices, instead of laboriously done one device at a time. Mobility Edge acts as a foundation on which all future mobile computers are being built.

Featured Mobility Edge Product—CK65 Mobile Computer

The CK65 mobile computer boosts supply chain productivity by accelerating and error-proofing work in distribution centers. Boasting the longest supported lifecycle in the industry, up to 28-hour battery life and best-in-class ruggedness, the CK65 maximizes uptime, while providing an easy path for users to migrate from legacy Windows® operating systems to the Android™ platform.

Make Safety a Priority

In response to the current health crisis, AB&R is providing innovative solutions that optimize worker performance and ensure safety. New response features are a critical component of Operational Intelligence and allow workers to react quickly, while reducing the frequency of contact.

Now more than ever, it is critical to safeguard workers in distribution centers and warehouses. Ensuring safety, while maintaining efficiency, can be a daunting task. But it doesn't have to be. Operational Intelligence is a remote asset management platform that ensures mobile-equipped employees stay productive, while complying with local site health and safety regulations.

Considering all health and safety requirements, new crisis response features have been incorporated into Operational Intelligence:

- Asset Check-Out/Check-In
- Device Cleaning Management
- Remote Control and Device System Wipe
- Social Distance Proximity Detection

Featured Safety Products

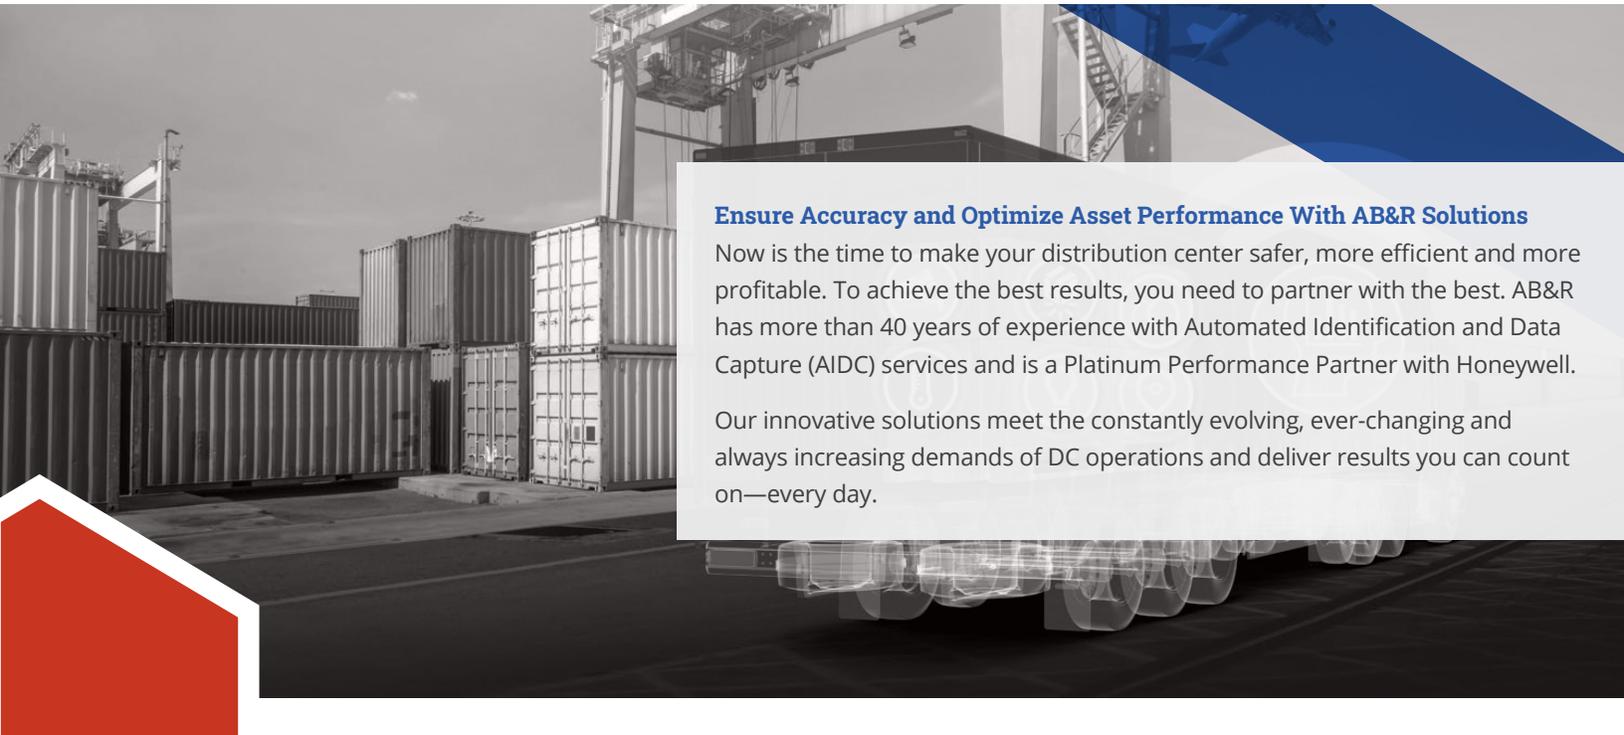

8680i Wearable Mini Mobile Computer

The 8680i Wearable Mini Mobile Computer is Honeywell's most advanced, high-performance Bluetooth® scanning solution. The compact, lightweight, and ergonomically designed mobile computer can be comfortably worn on one hand and is designed to streamline high-volume workflows with increased speed and efficiency. But it is rugged enough to handle industrial work environments.

UV Cleaning

UV Cleaning (UV-C) light from AB&R is the solution to keeping workers safe and devices sanitized. Medical professionals and flight crews trust this device to disinfect surfaces in ambulances, hospital rooms, airplanes and the like. Replacing harsh chemicals and designed to eradicate harmful bacteria from frequently used devices, the stand-alone model sanitizes devices in mere minutes.

Ensure Accuracy and Optimize Asset Performance With AB&R Solutions

Now is the time to make your distribution center safer, more efficient and more profitable. To achieve the best results, you need to partner with the best. AB&R has more than 40 years of experience with Automated Identification and Data Capture (AIDC) services and is a Platinum Performance Partner with Honeywell.

Our innovative solutions meet the constantly evolving, ever-changing and always increasing demands of DC operations and deliver results you can count on—every day.

Find out what your business has to gain from the right solutions.
